Abstract

In recent years, there have been major changes in education due to the rapid development of technology. One of the examples is the use of digital technology and electronic tools in training. Thus, the aim of the current study was to develop student's skill to play the Morin Khuur (a horse-head fiddle, a Mongolian traditional musical instrument) using electronic appliances. We conducted an experimental study using digital training equipment tools, and involving 26 students from the second- to fourth-year students in Mongolian and Inner Mongolian universities. The results of the study show that electronic tools have an effect on the improvement of the ability of students to play the Morin Khuur. The teaching and learning methods of the Morin Khuur has an important effect on the music culture of the Mongolian Tuurgat regions. It is believed that the current in-depth study can greatly contribute to improve the quality of the Morin Khuur training.
